

Write a LEX program to check whether the given input is digit or not.

**Program: (digit\_or\_not.l)**

```
%%  
[0-9]+ {printf("\nValid digit \n");}  
.* printf("\nInvalid digit\n");  
%%  
int yywrap(){  
int main()  
{  
yylex();  
return 0;  
}
```

**Output:**

C:\lex\_programs>a.exe

34

Valid digit

h76

Invalid digit

A screenshot of a terminal window with a black background and white text. It shows the command 'C:\lex\_programs>a.exe' being executed, followed by the output '34', 'Valid digit', 'h76', and 'Invalid digit' on separate lines.

C:\lex\_programs>a.exe

34

Valid digit

h76

Invalid digit
